the human sciences address problems in nature and society that often require coordinated approaches of several scientific disciplines and scholarly research embracing the social and biological sciences and history when we wish for example to understand how some sub populations and not others come to be vulnerable why a disease spreads in one part of a population and not another or which gene variants are transmitted across generations then a remarkable range of disciplinary perspectives need to be brought together from the study of institutional structures cultural boundaries and social networks down to the micro biology of cellular pathways and gene expression the need to explain and address differential impacts of pressing contemporary issues like aids ageing social and economic inequalities and environmental change are well known cases in point population concepts models and evidence lie at the core of approaches to all of these problems if only because accurate differentiation and identification of groups their structures constituents and relations between sub populations are necessary to specify

their nature and extent the study of population thus draws both on statistical methodologies of demography and population genetics and sustained observation of the ways in which populations and sub populations are formed maintained or broken up in nature in the laboratory and in society in an era in which research needs to operate on multiple levels population thinking thus provides a common ground for communication and critical thought across disciplines population in the human sciences addresses the need for review and assessment of the framework of interdisciplinary population studies limitations to prevailing postwar paradigms like the evolutionary synthesis and demographic transition were becoming evident by the 1970s subsequent decades have witnessed an immense expansion of population modelling and related empirical inquiry with new genetic developments that have reshaped evolutionary population and developmental biology the rise of anthropological and historical demography and social network analysis are playing major roles in rethinking modern and earlier population history more recently the emergence of sub disciplines like biodemography and evolutionary anthropology and growing links between evolutionary and developmental biology indicate a growing convergence of biological and social approaches to population

the literature on rural america to the extent that it exists has largely been written by urban based scholars perpetuating out of date notions and stereotypes or by those who see little difference between rural and agricultural concerns as a result the real rural america remains much misunderstood neglected or ignored by scholars and policymakers alike in response emery castle offers the changing american countryside a volume that will forever change how we look at this important subject castle brings together the writings of eminent scholars from several disciplines and varying backgrounds to take a fresh and comprehensive look at the forgotten hinterlands these authors examine the role of non metropolitan people and places in the economic life of our nation and cover such diverse issues as poverty industry the environment education family social problems ethnicity race religion gender government public policy and regional diversity the authors are especially effective in demonstrating why rural america is so much more than just agriculture it is in fact highly diverse complex and interdependent with urban america and the international market place most major rural problems they contend simply cannot be effectively addressed in isolation from their urban and international connections to do so is misguided and even hazardous when one fourth of our population and ninety seven per cent of our land area is rural together these writings not only provide a new and more realistic view of rural life and public policy but also suggest how the field of rural studies can greatly enrich our understanding of national life
